

Modifying eNotary Seal Microtext

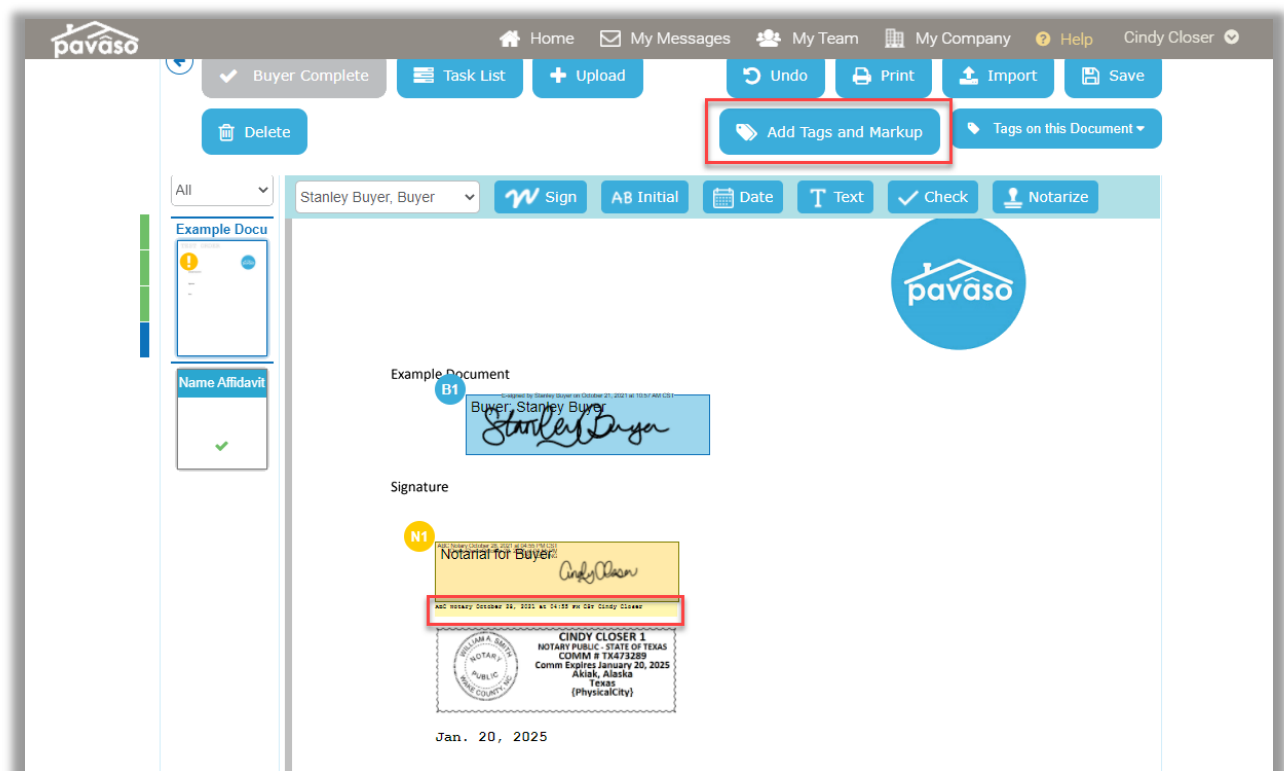

To accommodate the varying needs per state, an option has been added to modify the microtext present when eNotarization occurs.

Note: This option is configurable by state and must be enabled by Pavaso. If you have questions about the availability of this option in your state, please contact support@pavaso.com.

When this setting is enabled, microtext will appear in a yellow box near the electronic seal. This is available during the closing after the eNotarization has occurred. The microtext can be modified in the Document Viewer during closing, or in **Add Tags and Markup**. Select **Save** to retain any changes.

The microtext on the signature seal will auto-populate in the yellow microtext box.

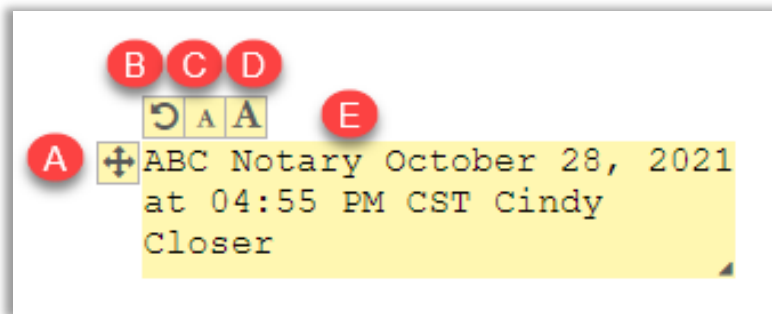

Important Note: Once the document has been saved, the microtext can only be modified via the **Add Tags and Markup** option.

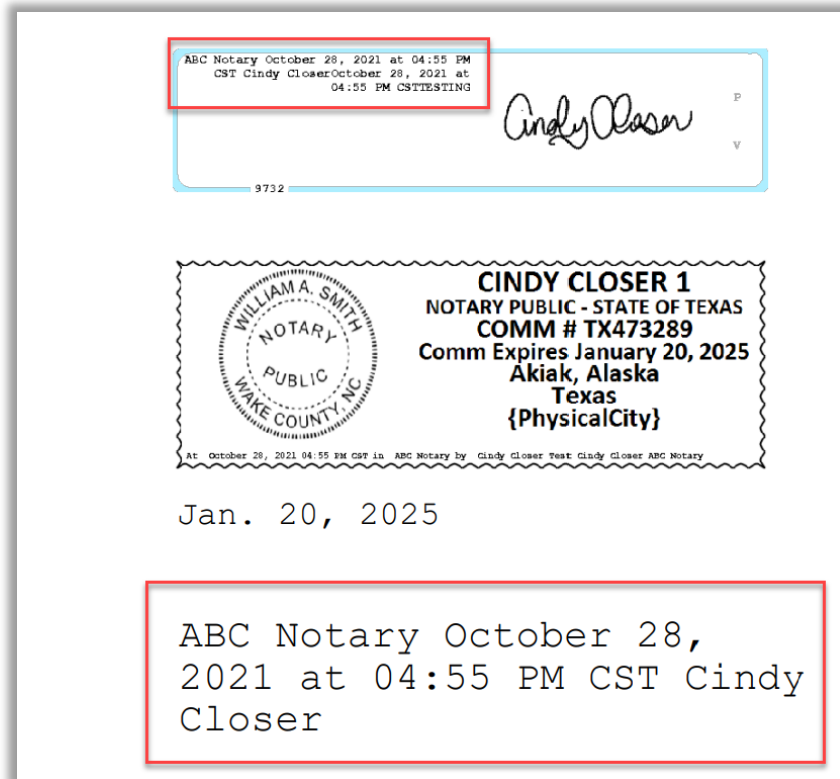

To modify the microtext, click inside the yellow box. Several options will appear:

- A. **Move:** Click and drag the microtext box to a new location on the document
- B. **Rotate:** Rotate the microtext box 90 degrees
- C. **Decrease Text Size:** Decrease size of text in the microtext box
- D. **Increase Text Size:** Increase size of text in the microtext box
- E. **Text box:** Delete or add text to the microtext box

The microprint text will still appear in next to the signature Post-Closing. The new microtext will appear where placed during the closing with any modifications made.
